Office Action Summary

Application No.

09/587,496

Applicant(s)

BAILEY ET AL.

Examiner

Ayal I Sharon

Art Unit

2123

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 02 June 2000.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-23 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-23 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 6/2/00 is/are: a) ☐ accepted or b) ☒ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. §§ 119 and 120

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 13) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application) since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.
- a) ☐ The translation of the foreign language provisional application has been received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121 since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☒ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

Introduction

1. Claims 1-23 of U.S. Application 09/587,496 filed on 06/02/2000 are presented for examination.

Drawings

2. The draftsman has objected to the drawings submitted on 6/2/00. Please see form PTO-948 for details of the objections.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before

Art Unit: 2123

November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. The prior art used for these rejections is as follows:
5. Wang et al. U.S. Patent 6,134,516. (Henceforth referred to as "**Wang**").
6. The claim rejections are hereby summarized for Applicant's convenience. The detailed rejections follow.
7. **Claims 1-8 and 10-23 are rejected under 35 U.S.C. 102(e) as being anticipated by Wang (U.S. Patent 6,134,516).**
8. In regards to claim 1, Wang teaches the following limitations:

1. A method comprising: retrieving state configuration information from a state server of a hardware/software co-simulation; and providing a client of the hardware/software co-simulation access to a server state of the state server based on the state configuration information. (Wang, especially: Abstract; col.3, line 55 – col.4, line 7; col.6, lines 56-67; col.7, lines 25-49; col.10, lines 15-17 and Fig.55; col.14, line 33 – col.15, line 2; col.78, line 63 – col.79, line 11; col.81, lines 1-17; col.81, line 26-47; col.83, line 37 – col.84, line 55;)

9. In regards to claim 2, Wang teaches the following limitations:

2. The method of claim 1 wherein the state server defines an address space or a virtual address space in the hardware/software co-simulation. (Wang, especially: Fig.3, Items 210, 215, 220; Figs.11-15 and col.8, lines 34-46;)

Applicants state in the specification (p.7, lines 10-13) that "Software is written in a programming language that needs to be compiled by a compiler before it can be executed on a processor. Part of the job of the compiler is to allocate symbols to addresses." Wang expressly teaches a compiler in Fig.3. The feature of defining an address space is, according to Applicants' admission, inherent. Figs.11-15 show the use of "address points", which would not be able to function if there were no address space defined.

10. In regards to claim 3, Wang teaches the following limitations:

3. The method of claim 1 wherein the state configuration information comprises at least one of symbol allocation and symbol type.

Art Unit: 2123

(Wang, especially: Fig.3, Items 210, 215, 220)

Applicants state in the specification (p.7, lines 10-13) that "Software is written in a programming language that needs to be compiled by a compiler before it can be executed on a processor. Part of the job of the compiler is to allocate symbols to addresses." Wang expressly teaches a compiler in Fig.3. The feature of symbol allocation is, according to Applicants' admission, inherent.

11. In regards to claim 4,

4. The method of claim 1 further comprising: registering the client with a co-simulation interface; and associating the client with at least one state server in the hardware/software co-simulation.
(Wang, especially: Fig.55, and col.10, lines 15-17; Figs.47-48 and col.83, line 37 to col.84, line 41;)

12. In regards to claim 5,

5. The method of claim 4 wherein registering the client comprises assigning the client a client identifier.
(Wang, especially: col.83, line 37 to col.84, line 65;)

Col.84, line 62 expressly refers to a "owner identification".

13. In regards to claim 6,

6. The method of claim 4 wherein associating the client with at least one state server comprises providing the client with a list of available state servers and one or more address spaces associated with each of the available state server.
(Wang, especially: col.83, line 37 to col.84, line 65;)

14. In regards to claim 7,

7. The method of claim 6 wherein said client is to retain an identifier for at least one address space from the list.
(Wang, especially: col.83, line 37 to col.84, line 65;)

15. In regards to claim 8,

8. The method of claim 6 wherein said client is to return a selection from the list and wherein associating the client with at least one state server further comprises providing the client an identifier for at least one address space from the list based on the selection.
(Wang, especially: col.83, line 37 to col.84, line 65;)

16. In regards to claim 10,

10. The method of claim 1 further comprising: requesting the state configuration information, said state configuration information to define at least one memory location comprising the server state.
(Wang, especially: col.83, line 37 to col.84, line 65;)

17. In regards to claim 11,

11. The method of claim 10 wherein requesting the state configuration information comprises: receiving a client identifier for the client at a co-simulation interface;

receiving an identifier for an address space at the co-simulation interface, said server state being within the address space;

(Wang, especially: col.83, line 37 to col.84, line 65;)

and issuing a request from the co-simulation interface, said request including the client identifier and the identifier for the address space.

(Wang, especially: col.83, line 37 to col.84, line 65;)

18. In regards to claim 12,

12. The method of claim 11 wherein the request is to be serviced by the state server, said state sever to access a symbol table indicated by the identifier for the address space and to provide the state configuration information based on the symbol table.

(Wang, especially: col.83, line 37 to col.88, line 48;)

19. In regards to claim 13,

13. The method of claim 11 where a path of the request comprises a hardware kernel, a bus interface module within a logic simulator, an interprocess connection, a co-simulation manager within a software kernel, an instruction set simulator, and a debugger.

(Wang, especially: col.23, lines 15-25; col.83, line 37 to col.84, line 65; col.86, lines 21-50)

20. In regards to claim 14,

14. The method of claim 1 wherein providing the client access comprises: performing a memory operation on at least one memory location based on the state configuration information.

(Wang, especially: col.83, line 37 to col.88, line 48;)

21. In regards to claim 15,

15. The method of claim 14 wherein performing the memory operation comprises at least one of: reading the server state; modifying the server state; receiving the server state at a predetermined future time; and receiving notification upon a predetermined action on the server state.

(Wang, especially: col.83, line 37 to col.88, line 48;)

22. In regards to claim 16,

16. The method of claim 14 wherein performing the memory operation comprises: generating a request for the memory operation, said request including a memory allocation from the state configuration information; accessing a memory map; and

(Wang, especially: col.83, line 37 to col.88, line 48;)

Art Unit: 2123

issuing the memory operation to a unified memory for the hardware/software cosimulation based on the memory allocation and the memory map.

(Wang, especially: col.83, line 37 to col.88, line 48;)

23. In regards to claim 17,

17. The method of claim 16 further comprising: receiving data in response to the memory operation; and interpreting the data based on a symbol type defined by the state configuration information.

(Wang, especially: col.83, line 37 to col.88, line 48;)

24. In regards to claim 18,

18. The method of claim 1 further comprising:

receiving stimulus based on the server state;

(Wang, especially: col.3, line 55 – col.4, line 7; Abstract; col.6, lines 56-67; col.7, lines 25-49; col.10, lines 15-17 and Fig.55; col.14, line 33 – col.15, line 2; col.78, line 63 – col.79, line 11; col.81, lines 1-17; col.81, line 26-47; col.83, line 37 – col.84, line 55;)

and applying the stimulus to the hardware/software co-simulation.

(Wang, especially: col.3, line 55 – col.4, line 7; Abstract; col.6, lines 56-67; col.7, lines 25-49; col.10, lines 15-17 and Fig.55; col.14, line 33 – col.15, line 2; col.78, line 63 – col.79, line 11; col.81, lines 1-17; col.81, line 26-47; col.83, line 37 – col.84, line 55;)

25. In regards to claim 19,

19. The method of claim 18 wherein the stimulus comprises data to be injected into the hardware/software co-simulation in response to a predetermined condition associated with the server state.

(Wang, especially: col.3, line 55 – col.4, line 7; Abstract; col.6, lines 56-67; col.7, lines 25-49; col.10, lines 15-17 and Fig.55; col.14, line 33 – col.15, line 2; col.78, line 63 – col.79, line 11; col.81, lines 1-17; col.81, line 26-47; col.83, line 37 – col.84, line 55;)

26. In regards to claim 20, Wang teaches the following limitations:

20. A method comprising: accessing a software state from a hardware simulation process in a hardware/software co-simulation.

(Wang, especially: col.3, line 55 – col.4, line 7; Abstract; col.6, lines 56-67; col.7, lines 25-49; col.10, lines 15-17 and Fig.55; col.14, line 33 – col.15, line 2; col.78, line 63 – col.79, line 11; col.81, lines 1-17; col.81, line 26-47; col.83, line 37 – col.84, line 55;)

27. In regards to claim 21, Wang teaches the following limitations:

Art Unit: 2123

21. A machine readable storage medium having stored thereon machine executable instructions, execution of said machine executable instructions to implement a method comprising:

retrieving state configuration information from a state server of a hardware/software co-simulator; and

(Wang, especially: Abstract; col.3, line 55 –col.4, line 7; col.6, lines 56-67; col.7, lines 25-49; col.10, lines 15-17 and Fig.55; col.14, line 33 – col.15, line 2; col.78, line 63 – col.79, line 11; col.81, lines 1-17; col.81, line 26-47; col.83, line 37 – col.84, line 55;)

providing a client of the hardware/software co-simulator access to a server state of the state server based on the state configuration information.

(Wang, especially: Abstract; col.3, line 55 –col.4, line 7; col.6, lines 56-67; col.7, lines 25-49; col.10, lines 15-17 and Fig.55; col.14, line 33 – col.15, line 2; col.78, line 63 – col.79, line 11; col.81, lines 1-17; col.81, line 26-47; col.83, line 37 – col.84, line 55;)

28. In regards to claim 22, Wang teaches the following limitations:

22. A machine readable storage medium having stored thereon machine executable instructions, execution of said machine executable instructions to implement a method comprising: accessing a software state from a hardware simulation process in a hardware/software co-simulation.

(Wang, especially: Abstract; col.3, line 55 –col.4, line 7; col.6, lines 56-67; col.7, lines 25-49; col.10, lines 15-17 and Fig.55; col.14, line 33 – col.15, line 2; col.78, line 63 – col.79, line 11; col.81, lines 1-17; col.81, line 26-47; col.83, line 37 – col.84, line 55;)

29. In regards to claim 23, Wang teaches the following limitations:

23. An apparatus comprising: a hardware/software co-simulator to retrieve state configuration information from a state server; and a unified memory store, said hardware/software co-simulator to provide a client access to a server state of the state server within the unified memory store based on the state configuration information.

(Wang, especially: Abstract; col.3, line 55 –col.4, line 7; col.6, lines 56-67; col.7, lines 25-49; col.10, lines 15-17 and Fig.55; col.14, line 33 – col.15, line 2; col.78, line 63 – col.79, line 11; col.81, lines 1-17; col.81, line 26-47; col.83, line 37 – col.84, line 55;)

Claim Rejections - 35 USC § 103

30. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

Art Unit: 2123

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

31. The prior art used for these rejections is as follows:

32. Wang et al. U.S. Patent 6,134,516. (Henceforth referred to as “**Wang**”).

33. Klein et al., U.S. Patent 5,768,567. (Henceforth referred to as “**Klein**”).

34. The claim rejections are hereby summarized for Applicant’s convenience. The detailed rejections follow.

35. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Wang (U.S. Patent 6,134,516) in view of Klein (U.S. Patent 5,768,567).

36. In regards to claim 9, Wang does not expressly teach the following limitations:

9. The method of claim 1 wherein the state server comprises an instruction set simulator (ISS) and a bus interface model (BIM).

However, Klein does expressly teach these limitations. (See col.1 – col.2, “Background of the Invention”).

It would have been obvious for one of ordinary skill in the art at the time the invention was made to modify the teachings of Wang with the teachings of Klein by incorporating a bus interface model (BIM), because “For the more ‘complex’ hardware, since it is very difficult, if not outright impossible, to model all the behaviors of the hardware, certain accuracy are often sacrificed. For example, in the case of a microprocessor, it is often modeled by a ‘bus interface model’, i.e. only the different bus cycles that the processor can execute are modeled.” (Klein, col.1, lines 55-61)

Moreover, it would have been obvious for one of ordinary skill in the art at the time the invention was made to modify the teachings of Wang with the teachings of Klein by incorporating an instruction set simulator (ISS), because "Embedded systems that are most difficult to validate are those that are neither software or hardware dominant, in that both parts play an equally important role in the success of the system. Due to increased market pressures, hardware and software are usually developed in parallel. Typically, the hardware designers would validate the hardware design using an hardware simulator or emulator. Concurrently, the software designer would validate the software using an instruction set simulator [ISS] on a general purpose computer." (Klein, col.1, line 65 – col.2, line 7).

Conclusion

37. The following prior art, made of record and not relied upon, is considered pertinent to applicant's disclosure.

38. Tseng et al., U.S. Patent 6,009,256.

39. Lin et al. U.S. Patent 6,389,379.

40. Lin et al., U.S. Patent 6,421,251.

41. Klein et al., U.S. Patent 5,771,370.

42. Klein et al., U.S. Patent 6,212,489.
